Education

Technical Diploma in Computer Science

Collège Maisonneuve, Montreal, QC

Application Development

2022 – 2025

Languages

Arabic (Native), English (Professional Proficiency), French (Professional Proficiency)

Full-Stack Development Skills

Programming Languages: Java, Python, Lua, JavaScript, C#, React, Vite, Typescript, Flutter, Kotlin

Web Technologies: CSS, HTML, React, Node.js, Vite

Database Management: SQL, Scala, MongoDB, Hadoop

IDEs: Visual Studio, Eclipse, PyCharm, Jupyter Notebook, Android Studio, Arduino, Unity

Publishing Software: Adobe InDesign, MS Office Suite

Qualifications: Problem-solving, Teamwork, Quick Adaptability, Strong Organization Skills

Projects

Better Call Saul AI – ConUHacks IX Winner

2025 – Present

Team Project with 4 Members

- Led full-stack development and UI design, building the entire website using Vite, React, and TypeScript.
- Integrated AI models, including DeepSeek for translation and Deepgram for speech-to-text and text-to-speech.
- Developed a custom AI system to assist Quebec citizens with legal inquiries, providing accurate legal information.
- Strengthened expertise in AI integration, full-stack web development, and user-centered design.

3D Art Gallery

2025 – 2025

Team Project with 4 Members - Leader

- Led development and programming of an immersive 3D art gallery using Unity and C#.
- Designed a first-person navigation system, allowing users to explore and interact with artwork.
- Implemented a global chat feature with Firebase for real-time communication, authentication, and security.
- Enhanced skills in game development, networking, and immersive user experiences.

Shadow Realm – 2D Hack & Slash Platformer

2025 – Present

Team Project with 4 Members, Full-Stack Developer

- Contributed to all aspects of development, including coding, design, and gameplay mechanics.
- Built a dynamic 2D combat system in Unity using C#, featuring multiple enemies, levels, a boss fight, and an endless wave mode.
- Integrated Firebase for real-time data storage, enabling users to track their progress via a connected website.
- Strengthened skills in game development, backend integration, and interactive design.

Automated Waste Management System (Smart Trash Can)

2024 – 2024

Team Project with 4 Members

- Designed and implemented an AI detector for waste sorting using Python and YOLOv5.
- Modeled and designed the concept of a smart trash bin using Blender.
- Programmed scripts and managed sensors with Raspberry Pi and Arduino.
- Gained advanced skills in AI, 3D modeling, and embedded systems.

Complete Hairdressing Reservation Web Application

2024 – 2024

Team Project with 4 Members - Leader

- Developed a complete application using JavaScript, HTML, CSS, and Node.js.
- Implemented features such as registration, login, and a reservation system to ensure a smooth user experience.
- Managed a significant portion of the code while optimizing performance and enhancing the application.
- Collaborated with a team of 4 developers on both frontend and backend functionalities.
